

The future of
feedstock
pretreatment is here

Crown's new **Renewable Fuels** Pilot Plant

Validate, scale and commercialize with Crown.

With the global demand for renewable diesel/HVO, biofuel and sustainable aviation fuel (SAF) increasing rapidly, meet your goals for validating the pretreatment of feedstocks with a **first-of-its-kind continuous-process Liquids Pilot Plant** inside Crown's Global Innovation Center.

Our state-of-the-art facilities and capabilities will prove to be a game changer for renewable fuel producers looking to meet the rigorous demands of Renewable Diesel/HVO, SAF and Biodiesel production.

Don't wait. Innovate with Crown.

Partnering with Crown gives you access to everything you need to replicate the performance of our **RD Ready™ Pretreatment** system with your specific feedstocks and provide an extra measure of confidence to the stakeholders in your project.

Protect your renewable fuel investment

With a full suite of analytical lab testing to demonstrate measurable conformance qualification to the most stringent quality specifications, renewable fuel companies can conduct real-world testing, research, and training in a confidential, risk-free environment. Crown's full life cycle approach delivers global market insights from greenfield design through full aftermarket services and support, giving you full confidence in your investment.

The new Liquids Pilot Plant within Crown's Global Innovation Center offers:

- Proof of concept – explore new feedstocks and blends including emerging oilseed crops
- Validation – ensure maximum contaminant removal and the cleanest feedstock possible
- Analytical testing – generate data to support process guarantees and narrow in on expected consumption of adsorbents
- Scalability – go from pilot to commercialization with confidence
- Optimize processes – reduce downtime and increase efficiencies

- Full Life Cycle approach – our product life cycle strategy delivers innovation, superior equipment and process engineering expertise across the full manufacturing spectrum
- Risk reduction - get the data you need to evaluate the Total Cost of Ownership (TCO) and make future investments with confidence
- Dedicated, responsive team - count on our experts and high level of service to support you at every step
- Extensive experience – bring us any feedstock – from vegetable oils, waste oils, used cooking oils and animal fats – we have experience with it all

Are you ready to rule the renewable fuels market?

Bring your ideas, challenges and staff to Crown's Innovation Center and Liquids pilot plant. As your trusted, problem-solving partner, we offer the right environment, expertise and technologies to help you stand out in the competitive renewable fuels market.

Discover how Crown can help drive future business for you and your customers in the renewable fuels market.
